PROFILE SUMMARY

Full Stack Developer with hands-on experience in backend engineering, REST API development, and cloud deployments. Proficient in FastAPI, React, PostgreSQL, and MongoDB with a strong track record of building production-grade systems including payment pipelines, recommendation engines, and multi-role APIs. Comfortable working across the entire stack with a focus on scalability, clean architecture, and real-world impact.

TECHNICAL SKILLS

Programming Languages: Python, C++ , JavaScript, TypeScript, SQL, HTML, CSS

Cloud and DevOps: AWS (S3, RDS, EC2), GitHub Actions, CI/CD, Docker, Sentry, Render, Vercel, Railway

Full Stack Development: FastAPI, REST, JWT, OAuth 2.0, MongoDB, PostgreSQL, Stripe, Razorpay, Node.js, Redis, React.js, Next.js, TailwindCSS, Django, Firebase, Docker

WORK EXPERIENCE

Full Stack Developer

NuLook — *Beauty & Wellness Platform, Bengaluru*

Jan 2026 – Present

Tech Stack: FastAPI, PostgreSQL, React, Razorpay, Firebase, Redis, JWT

- **Architected a personalized recommendation engine** from scratch using a weighted content-based scoring algorithm that maps customer quiz responses to tags and personas, delivering ranked salon package suggestions with a **1-hour in-memory profile cache** to eliminate redundant database queries.
- **Engineered a production-grade Razorpay payment pipeline** covering full order lifecycle — order creation, HMAC-SHA256 signature verification, and webhook-driven status reconciliation — with IST-aware slot validation ensuring **zero booking conflicts** across vendor availability windows.
- **Designed a gamified dual-currency reward system** (NueCredits + NueCoins) paired with a coupon engine supporting FLAT and PERCENT discount modes, per-customer usage limits, and expiry enforcement — all enforced **atomically at checkout**.
- **Built a scalable multi-role REST API** (Superadmin, Vendor, Customer, Marketing) with JWT-based auth, per-route rate limiting, and Firebase push notifications — spanning **20+ modules** covering bookings, referrals, employees, documents, and real-time appointment management.

SDE Intern

TechnoWard Technologies, Bengaluru

Sept 2025 – Dec 2025

Tech Stack: FastAPI, Python, JWT, Docker

- **Developed and integrated RESTful APIs** using FastAPI and Python, enabling seamless communication between frontend and backend services across multiple modules.
- **Implemented authentication and authorization flows** using JWT, enhancing application security and supporting role-based access control for multi-user environments.
- **Assisted in containerizing services** using Docker and managing deployments on cloud platforms, contributing to a more reliable and scalable production setup.

PROJECTS

- **InvoiceHub: Multi-Tenant SaaS Invoice And Billing Platform**

[Live Demo](#)

Tech Stack: React, Vite, FastAPI, MongoDB, Stripe, JWT, Vercel, Railway

Built a full-stack invoice management application with isolated data scoping per user and role-based access control. Implemented complete invoicing workflow with line items, taxes, discounts, automated PDF generation, email delivery, and **Stripe payment integration** with webhook-based status updates. Deployed with frontend on Vercel, backend on Railway, and database on MongoDB Atlas.

EDUCATION

Visvesvaraya Technological University

Bachelor of Engineering – Information Science

Bangaluru, Karnataka, India

December 2021 – May 2025
